

BCCP 2025 introductions

Dylan Green

New Postdoc at LBL | dylanag@uci.edu (or dylangreen@lbl.gov)

Former Work:

QuasarNET (arxiv:2505.01596)

- Updated QuasarNET training using Active Learning

Bayesian Coaddition

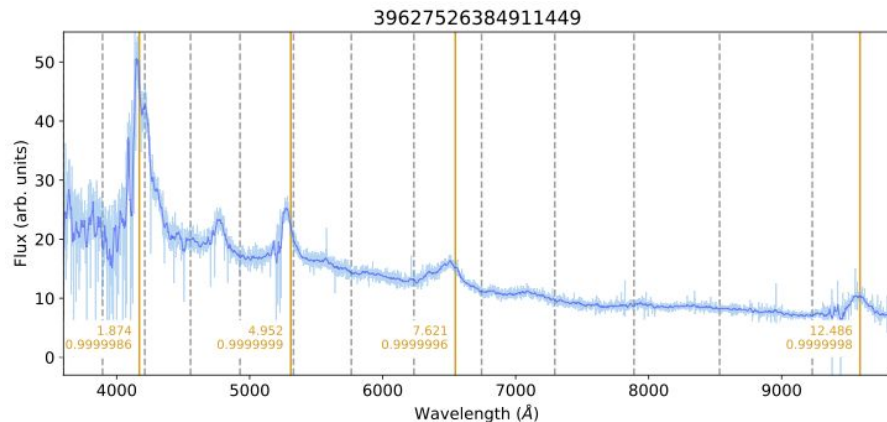

- Coadding spectroscopic exposures using Bayes' theorem and likelihoods

Nonnegative Matrix Factorization Templates (doi:10.1109/TSP.2024.3474530)

- Using NMF to generate spectroscopic templates (for redrock or other purpose)

Future Work:

- Technical: work with the DESI Survey Operations and Data Operations teams at LBL
- Science: Still TBD (too many options to choose from, but probably LyA/quasar related)

DARK ENERGY
SPECTROSCOPIC
INSTRUMENT

U.S. Department of Energy Office of Science

Hobbies:

Watching movies, running, golf, fountain pens, writing, recreational programming, stamp collecting...

Anna Coerver

acoerver@berkeley.edu, Physics North 278

Grad student (Bill Holzapfel's group)

Currently interested in

- Cosmic birefringence
- Cryogenic instrumentation (SPT-3G+)
- CMB power spectrum noise, especially polarized atmospheric emission

Always happy to chat!

South Pole Telescope

Joe DeRose

Staff Scientist @ BNL
jderose@bnl.gov

I'm a staff scientist at Brookhaven, but currently working remotely, largely at LBL!

Research:

- How to optimally extract info from lensing and clustering data to probe gravity.
- How can we use DESI data to improve weak lensing measurements?
- Surveys: DESI, DES, LSST
 - Convener of Cross Analysis Infrastructure group in DESI (if you have DESI simulation/catalog questions)

Techniques: Simulations, Statistics and Machine Learning, HPC, Theory

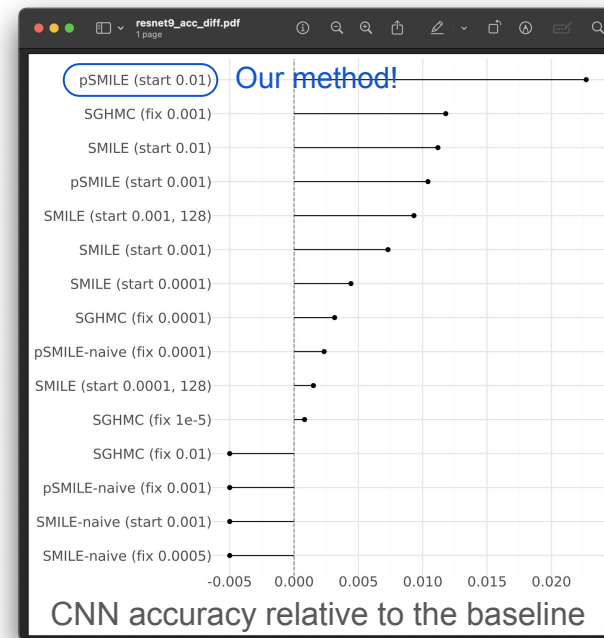

Kangning Diao dkn20@berkeley.edu

Visiting student 24-25 -> Postdoc starting Oct 25 w/ Uros

Currently work on:

- Stochastic gradient MCLMC:
 - Given N observations, using $n \ll N$ random selected observations for each sampling step. (much faster!)
 - Sample high-dimensional variables, e.g. parameters in a convolutional neural network (CNN).
- Exoplanet candidate validation:
 - Check and improve the probability of different scenarios for exoplanet candidates.

Alina Sabyr (new BCCP fellow)

Contact: asabyr@berkeley.edu + Slack

Research interests (during grad school & ongoing):

- Extracting non-gaussian information from surveys (WL, tSZ) using NG statistics → astrophysics + cosmology
- Spectral distortions → new experiment ideas
- FRBs → mapping distribution of baryons with dispersion measure

+ additional interests:

- Learning more about baryons by combining different probes (e.g., SZ, galaxy surveys, FRBs...)
- Machine learning
- + more (happy to chat!)

Columbia → UCB

Simona Mei

Distinguished Professor, U. Paris Cité

Affiliated to the international laboratory CNRS/UCBerkeley Pierre Binetruy Center

Responsible for the large-scale structure axis at the center

Galaxy formation and evolution, scaling relation and quenching

Galaxy clusters and galaxy evolution in different environments

First structures in the Universe: clusters and protoclusters at $z > 1.5$

Deep learning for galaxy cluster detection: YOLO-CL

Builder member of the Euclid consortium

Rubin member, co-chair of the Rubin Galaxies Science collaboration, member of DESC

<https://www.linkedin.com/in/simona-mei-1721bb3a/>

Cara Giovanetti

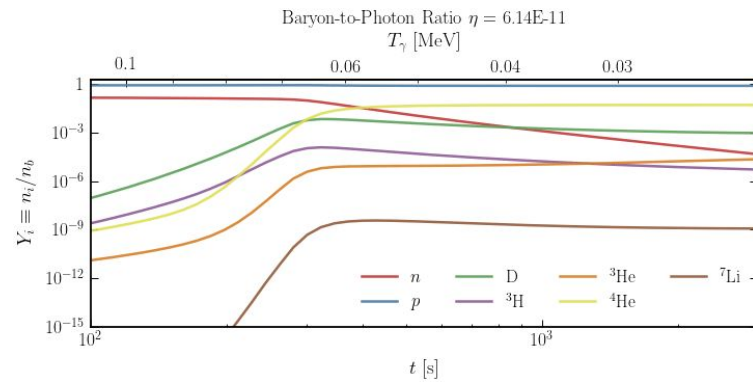

Reach me at
cgiovanetti@lbl.gov!

- I'm a BCTP post doc with research overlap with BCCP
- I want to modernize computational tools for cosmology. Previously I wrote a fast and differentiable BBN code called LINX and performed new parameter inference with it. Currently working on a fast and differentiable CMB code intended to compete with CLASS.
- I'm interested in using these tools to understand the particle nature of dark matter.

Ask me about writing code in 

Fast calculation of primordial element abundances with LINX:

Pat McDonald

LBL

- Have worked on (and still dabble in)
 - Lyman-alpha forest
 - Large-scale structure theory (e.g., perturbation theory/EFT)
 - DESI galaxy clustering analysis
- Currently trying to attach machine learning for small scales to EFT-type thinking on large scales to fully and quickly model the statistical distribution of galaxies

Erik Zaborowski

Visiting PhD student

(Fall 2025)

ezaborowski@lbl.gov

zaborowski.11@osu.edu

- Visiting 5th year grad from Ohio State U
(Advisor: Klaus Honscheid w/ Peter Taylor)
- Working with Simone Ferraro + Gerrit Farren
on DESI \times CMB lensing cross-correlations
- Interests:
 - Large-scale structure / DESI
 - CMB (\times galaxies)
 - Hubble tension / sound horizon-independent H_0 measurements

This work : DESI clustering (FM + BBN; r_d -free)

+ CMB Lensing + $\Omega_m^{Ly\alpha AP}$ + Ω_m^{DESY5}

+ CMB Lensing + $\Omega_m^{Ly\alpha AP}$ + $\Omega_m^{Pantheon+}$

+ CMB Lensing + $\Omega_m^{Ly\alpha AP}$ + Ω_m^{Union3}

DESI 2024 VII : FM + BBN

DESI 2024 VII : FM + BBN + BAO

DESI 2024 VI : BAO + BBN

(DESI 2024 + SDSS) : BAO + BBN

SDSS : BAO + BBN

CMB (no CMB lensing)

CMB

CCHP (HST + JWST) : SNIa + TRGB

SH0ES (HST) : SNIa + Cepheids

SH0ES + CCHP (JWST) : SNIa + TRGB + JAGB + Ceph.

Black: Sub-3% r_s -free H_0 constraint in DESI DR1
(Most precise to date) [[2411.16677](#)]

Antón Baleato Lizancos

BCCP postdoctoral fellow

- CMB lensing / delensing theory and analysis. Member of SO analysis team, co-lead of delensing working group.
- LSS x CMB lensing. Co-lead of DESI x CMB topical group.
- New methodologies: pixel-free clustering estimators, finger-of-god mitigation, understanding anisotropic dN/dz 's, modeling contribution from extragalactic foregrounds to CMB lensing reconstructions ++

Mark Maus

mark.maus@Berkeley.edu

5th year physics grad student

- Large scale structure with Martin White
- Cosmological constraints from galaxy/quasar clustering
- EFT models for analyses of RSD power spectra
 - + Post-recon BAO
 - + cross correlations with CMB lensing
- Involved in DESI
 - Galaxy&Quasar clustering (GQC)
 - Clustering/Clusters/Cross-correlations (C3)

John Banovetz- New LBNL Postdoc

- Working on the DESI spectropipeline with an emphasis on calibration products
- Previous work:
 - LSST/Rubin: Data Verification and Validation team and Camera group
 - PhD: supernovae and supernova remnants
- Interests: SN followup, ToOs, and Multi-messenger Astronomy

Kathlynn Simotas *(she/her/hers)*

3rd year PhD Student @ UCSB Physics & DOE
Computational Science Graduate Fellow @ LBL

At UCSB:

- Hydrodynamics & radiative transfer for supernovae with Lars Bildsten
- Ly α Forest & Reionization Simulations + Inference with Joe Hennawi

At LBL with Zarija Lukic:

- Radiative transfer methods for Nyx hydro code
- Diffusion methods towards Nyx foundation model

Here for the semester & looking forward to getting to know you!

Julien Guy

Staff scientist LBL

kguy@lbl.gov

DESI Spectroscopy:

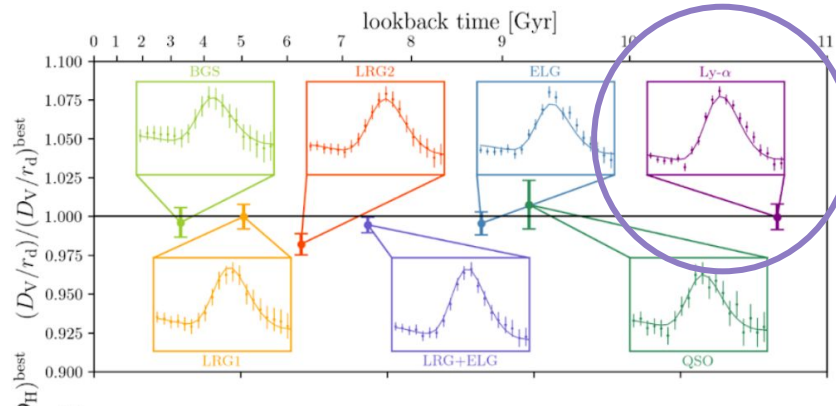

- CCD readout, calibration, validation
- Spectrograph focus, calibration
- Pipeline algorithms

Instrumentation for DESI-II :

- Low readnoise “MAS” CCDs
- First tests: 0.6 electron rms (when reading a 4kx4k CCD in 1 min)

DESI Lyman-alpha analysis:

- BAO Year 3 full-shape with EFT
- Multiple redshift bins
- Tests of systematics with mocks

3rd year PhD student at Paris-Cité University → Graduating in October

PhD subject: CMB data analysis for next generation CMB experiments

PhD advisor: Jacques DELABROUILLE

Research interests:

How to improve our understanding of foreground models?

What is the impact of instrumental systematics on CMB science?

Projects:

- Impact of realistic noise without a polarization modulator for the PICO mission
- Polarized dust emission maps of Planck PR4 maps

Anshuman Acharya

BCCP postdoctoral fellow, starting September 2025

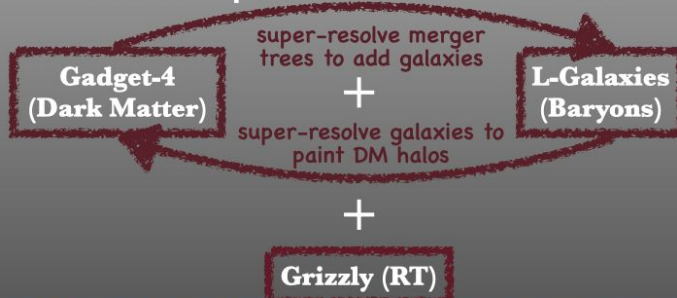

Epoch of Reionization: detecting and modelling the 21-cm signal power spectrum and other observables from the IGM, and cross-correlating with galaxy observables.

Semi-analytic models: for populating large parameter spaces of Universe models, without needing excessive computing time. Developing the *Polar* simulations.

Machine Learning:

At BCCP: working with the SynthObs team of the *Learning the Universe* collaboration.

Future plans with **POLAR**:

For signal extraction: learning from training sets of simulations, to look for specific signals in noisy data. E.g., variational autoencoders for extracting the 21-cm signal power spectrum from radio interferometer data.

For improved modelling: generative techniques via diffusion modelling are essential to boost the resolution of cosmological boxes, to factor in smaller scales in large simulations. Necessary to effectively explore parameter spaces without sacrificing resolution.

Edmond Chaussidon (LBNL fellow)

DESI collaboration member since 2020.

PhD at CEA Saclay (France) from 2020 to 2023

At the lab since nov. 2023

Previous Work:

- Quasar target selection for DESI
- Mitigation of imaging systematic in DESI
- Measurement of primordial non-gaussianity (PNG) via the scale-dependent bias (f_{NL}) with DESI DR1.
- Analysing DESI DR2 BAO.

Current Work:

- Topical Group lead for PNG with DESI DR2!
- Velocity reconstruction with kSZ (DESI x ACT)

Still enthusiast about coming to work at LBNL and looking forward to discovering new scientific subjects to which I can collaborate!

*Fake surfing in Santa Cruz
(watch the forecast twice next time!)*

How do we measure the 21 cm signal from the Cosmic Dawn?

H¹ERA

And what does it tell us?

Cosmic
Dawn
and EoR

Josh Dillon

Asst. Research Scientist, RAL

Jacques Delabrouille

Centre Pierre Binétruy (CNRS) & LBNL

Keywords:

CMB observations (Planck, CMB-S4)
CMB data analysis
Signal & image processing
Galactic and Extragalactic foregrounds
Microwave sky emission models & simulations

DARK ENERGY
SPECTROSCOPIC
INSTRUMENT

U.S. Department of Energy Office of Science

Allyson Brodzeller

Postdoc at Berkeley Lab

Interests:

- Lyman-alpha forest cosmology
 - Recent work on DLA survey techniques
- Quasar physics and evolution
 - Special interest in anomalies and outflow dynamics
- Maximizing the scientific return of large-scale experiments such as DESI
- Science policy

← my two kitties!

AllysonBrodzeller@lbl.gov

David Valcin (BCCP Postdoc w/ U. Seljak)

Research topics:

Alternative BAO reconstruction methods using machine learning

Applying Bayesian/ML tools to Globular Clusters analysis to constrain the Age of the universe

Interests:

Movies, Badminton, Ice cream

Simone Ferraro

Senior Scientist at LBNL

sferraro@lbl.gov

Research: cosmology (theory and analysis)

- CMB: secondary anisotropies (kSZ, tSZ, ...) and lensing
- Inflation: primordial gravitational waves, non-Gaussianity
- Reionization: imprint of the first stars and galaxies
- Galaxy formation and evolution
- Galaxy surveys: DESI, LSST
- Statistics and Machine Learning

Interested in a research project? Visit my webpage at sferraro.lbl.gov

Research Assistant Professor (Millenium Fellow) at Lawrence Berkeley National Laboratory

ZACK LI

BCCP Postdoc

- *Sampling / Optimization*
 - Large-scale sampling and optimization problems
 - MCLMC / CMB Lensing / applications to LuSE
- *21cm line intensity mapping*
 - Observational techniques for observing the redshifted 21-cm line
 - Calibration, foregrounds, experiment design
- *Science at ultra-long-wavelength*
 - LuSEE-Night and future lunar experiments

Abby Bault (she/her)

Postdoc at LBL | abault@lbl.gov

Office: 50-6062

Interests and Projects at LBL

Instrumentation (~80% time)

DESI focal plane, Positioner R&D

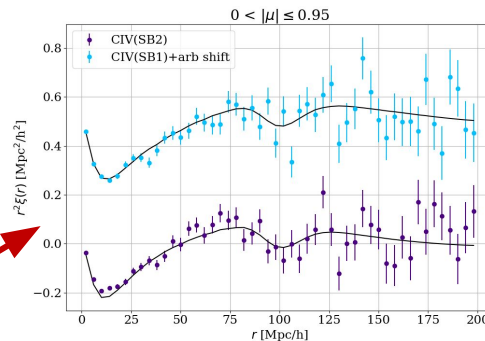

[[2508.19711](#)], CCD R&D [[2503.07930](#)],

DESI cryostats

Science (~20% time)

DESI Lyman-alpha forest group

Measuring BAO with the CIV forest

For fun

Watching hockey and other various sports,
crocheting, puzzles, hiking, cat snuggles,
LBL softball

DARK ENERGY
SPECTROSCOPIC
INSTRUMENT

U.S. Department of Energy Office of Science

Minas Karamanis

BCCP PostDoc

mkaramanis@berkeley.edu ♦ GitHub/minaskar ♦ Slack

Research interests

- Bayesian Machine Learning
- Development of scientific software (e.g., zeus, pocoMC, hankl, etc.)
- Gradient-free parameter estimation for 50–100 D
- Amortized Bayesian Model Comparison
- Applications to Cosmology (e.g., LSS, PNG, BAO) and Astronomy (e.g., gravitational waves, exoplanets)

Methods and techniques

- Probability and statistics
- Code (Python & Julia)
- Simulated data
- Analytic approaches
- ML & DL

pocoMC

zeus
Lightning Fast MCMC

Tian Xiao

(2nd-year PhD student, Particle Theory Group)

- **Research interests:** Dark matter at the intersection of particle physics, astrophysics and cosmology
- **Current project:** Constraining axion-like particles (ALPs) via photon-ALP mixing in blazar spectra

Haruki Ebina, fourth year PhD student

Advisor: Martin White

High-z cosmology using LAEs and LBGs

- Fisher forecasting for high-z multi-tracer surveys
- Target selection for DESI-II with medium bands from the IBIS (Intermediate Band Imaging Survey)
- Clustering analysis of IBIS-selected LAEs and LBGs using DESI spec-z's and HOD-based mock catalogs

Marked power-spectrum

- Perturbation theory based approach to density-marked statistics
- Can break degeneracies in power spectrum
- A step towards higher point statistics, but within the framework of two-point

Anousha Greiveldinger (she/her)

2nd year PhD student

anousha@berkeley.edu

- Advisor: Saul Perlmutter
- Current Research Interests:
 - Spectroscopy of lensed Type Ia SNe
 - Forward modeling for Integral Field Spectrographs

Pereira et al. (2013),
The Nearby Supernova Factory

Calvin Leung

Hubble/Miller Fellow 2023-2027
Campbell 205

What are they?

What are their host galaxies?

FRB offsets from HII regions (a YMC, perhaps?)

Fast Radio Bursts!

Why should we care?

Constraining AGN feedback
subgrid models &
small-scale CGM physics

Baryonic feedback & S8 tension
in the era of LSST/Euclid

How do we get more?

CHIME – leading the world in radio-transient VLBI

What should next-gen FRB telescopes look like?

Snoop Dogg

Andrei Cuceu

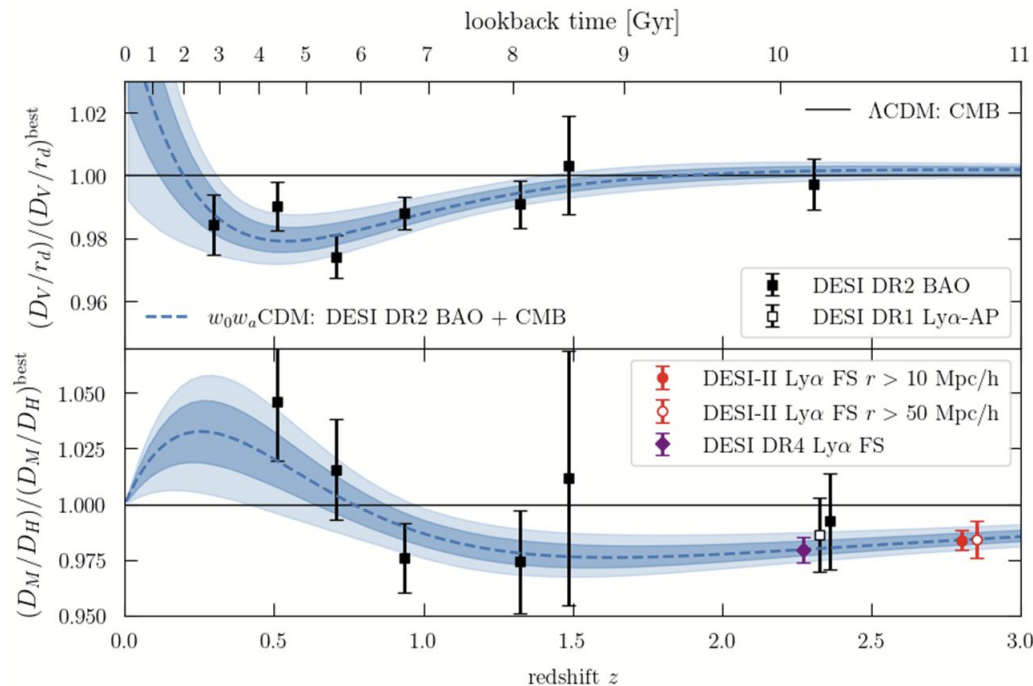

NHFP Einstein Fellow @ LBNL

DESI Lyman-alpha forest analyses:

- Ly α working group co-chair
- Year 3 Ly α full-shape Key Project
- EFT of LSS with Ly α correlations
- Study/modelling of Ly α forest contaminants (extra signal?)
- Many other projects

Building towards DESI-II High-z 3x2pt:

- Ly α ×Ly α + Ly α ×Gal + Gal×Gal
- Forecast constraints from Ly α forests in spectra of Lyman Break Galaxies (LBG)
- Developing modelling pipeline with EFT

U.S. Department of Energy Office of Science

James G. Bartlett

Director, Pierre Binétruy Center

French CNRS - UCB International Research Laboratory

- Professor, Université Paris Cité on leave to French CNRS
- Research: Galaxy clusters, large-scale structure, cosmic microwave background
- Projects
 - Cosmic microwave background
 - *Planck*, Simons Observatory, CMB-S4
 - Cosmic structure
 - *Euclid*, Rubin Observatory LSST
 - P.I. ECHO mission concept to study the circumgalactic medium

Pierre Binétruy Center (CPB)

French CNRS/IN2P3 - UCB International Research Laboratory (IRL)

Hosted by the UCB Physics Department (across the bridge in the N3AS area)

- **Objective:** Foster collaborative effort in Astroparticle Physics and Cosmology between French and American researchers in the Bay Area
 - Exchange of staff, postdocs, students between France and the Bay Area
 - Current/recent: S. Mei, R. Pain, M. Piat, R. Stompor, C. Cleland, E. De la Hoz, S. Gallego, O. Jeong, N. Franchini, N. Mai, E. Russier, J. Tang, T. Vinh Phat, A. Widmer
 - Strengthening link with Stanford/KIPAC
- The Center was renewed in Jan. 2025 for 5 years
- Three thematic axes:
 - Primordial Universe (J. Delabrouille - CNRS & LBNL)
 - Simons Observatory
 - CMB-S4
 - Large-Scale Universe (S. Mei - APC/Univ. Paris Cité)
 - *Euclid* mission
 - Vera Rubin Observatory LSST
 - Beyond the Standard Model (J. Billard - IP2I Lyon)
 - TESSERACT

yifeiluo@lbl.gov

Yifei Luo, Postdoc at LBNL

- DESI Legacy Imaging Surveys DR11
- Photo-z's with medium-band imaging surveys (Merian, IBIS, etc.)
- Galaxy-halo connection from galaxy-galaxy lensing around dwarf galaxies
- Stellar populations of dwarf galaxies

Makai Baker

1st year PhD student @ UC Berkeley
makai_baker@berkeley.edu

BSc @ Monash Uni, Australia

- ◆ Gravitational wave data analysis
- ◆ Fast Bayesian inference
- ◆ Numerical approximation techniques

Interests @ Berkeley

Broadly in cosmology (Theory + Analysis)

- ◆ CMB/ DESI / LSS / PNG
- ◆ Perturbation theory
- ◆ Computational + statistical techniques
- ◆ ... more!

Outside of PhD...

I love hiking and photography!
I'm new, so come chat!

Nicholas Huang

- Postdoc with Bill Holzapfel working on SPT
- Data/Instrumentation
 - Beam measurements and modeling
 - CMB secondaries and foregrounds
- Away from work: biking and cooking

Clara Vergès

Staff scientist @ LBL

cverges@lbl.gov <https://claraverges.github.io>

Research interests: CMB polarisation measurements to probe...

- Inflation
- Cosmic birefringence

What I work on

- Calibration & Instrumental systematics
- Forecasting & Experiment design optimisation
- Component separation

CMB collaborations

- South Pole Observatory – BICEP + SPT
- (CMB-S4)

Lia Lubit

lia.lubit@berkeley.edu

1st year PhD student, Berkeley Physics Department

Past Education

- ScB in Astrophysics, Brown University

Past Research

- Dark matter phenomenology
(thesis w/Prof. Stephon Alexander)
- Accretion disk astrophysics
- Satellite thermodynamics
- Primordial black hole modeling

Current Research Interests

- Theoretical and observational cosmology
- Inflation and the early universe
- Dark energy and dark matter
- SO / BICEP / DESI

Related Interests

- Scientific communication and outreach

Gerrit Farren

Postdoctoral Fellow @ LBL

BERKELEY LAB

gfarren@lbl.gov

I am mostly interested in CMB x LSS ...

- CMB Lensing - galaxy x-correlations
- high- z x-correlations
- x-correlation robustness and biases
- n-point cross-correlations
- Joint tSZ, kSZ, X-ray, lensing profiles

Projects I am working on ...

- DESI x CMB lensing (null- and systematics tests)
- eROSITA X-rays x DESI/CMB
- x-correlation biases from galactic dust
- $gg\kappa$ bispectrum (via $g^2\kappa$ skew spectrum)
- ...

unWISE g x CMB lensing
Blue ($\bar{z}=0.6$)

eROSITA x DESI LRGs

I'm in ...

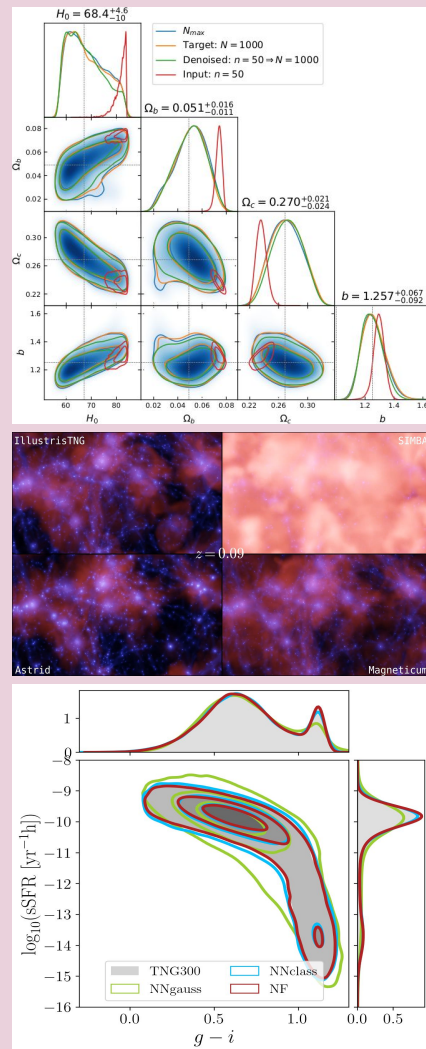

Natalí S. M. de Santi

Postdoc @UC Berkeley
natalidesanti@berkeley.edu

- Cosmological parameter inference
 - Machine learning and statistical methods
 - Hydrodynamic and DM only simulations
- Halo-galaxy connection
 - Machine learning and statistical methods
 - Hydrodynamic simulations, SAMs, and HODs
- Computational physics
 - Machine learning and numerical methods

Zarija Lukić

Staff scientist & C3 lead
Computational Cosmology Center (C3)
Berkeley Lab: building 50B, office 4218B
zarija@lbl.gov

Cosmological simulations

Anything simulations: physical models, algorithms, scaling on supercomputers

Nyx code: <https://amrex-astro.github.io/Nyx/>

Examples on arXiv: [0706.1270](#); [1301.4498](#); [1607.04218](#); [1905.07410](#); [2207.05023](#)

Large-scale structure of the universe

Focus on the Lyman α forest and the intergalactic medium

Examples on arXiv: [1406.6361](#); [1808.04367](#); [2012.04008](#); [2407.04473](#); [2412.05372](#)

Machine learning for cosmology

ML/AI as surrogates in simulations, foundation models, simulation-based inference

Examples on arXiv: [1706.02390](#); [2012.13083](#); [2106.12675](#); [2308.02637](#); [2502.02294](#)

Member of Dark Energy Survey (DES), DESI, Rubin

Research interests:

- Mitigating LSS imaging systematics (applied in DES)
- Photo + spectro survey synergies
 - E.g. Direct sample characterization, photo-z calibration, implications for sample definition
- Bayesian stats, model validation and comparison metrics, robust inference
- PNG with LSS
- Cosmology under global climate change: impacts and implications

Drop me a line at
NWeaverdyck@lbl.gov,
or swing by #5045 at LBL

Julien TANG

(JulienTang@lbl.gov)

2nd year PhD student at CPB and C3-LBNL with Jacques Delabrouille and Michel Piat. Member of LBNL CMB group.

Research interests:

- Comparison of mapmaking methods for ground-based CMB experiments
- Mitigation of systematics such as atmosphere emission
- Delensing of CMB B-modes

Time-ordered Astrophysics
Scalable Tools (TOAST)

TOAST

Frequency Maps (in progress).

Working towards minimal filtering of the astrophysical signal, given sufficient cross-linking

One realization of turbulent, wind-blown, atmospheric water vapor.
Using Reijo Keskitalo's atmosphere simulation tools.

Excerpt of Time-Ordered Datastreams of atmosphere emission and white noise, and fitting templates of the low-frequency drift.

Current Work:

- Model-Independent measurements of baryon feedback with lensing and kinematic Sunyaev-Zel'dovich effects.
- Studies of bound and unbound gas in various cosmological simulations.

R. Henry Liu
刘瑞涵

5th year PhD Candidate
working with Simone
Ferraro & Uros Seljak

rh_liu@berkeley.edu

Teaching:

- Physics 188/288: Bayesian Statistics in the Physical Sciences

Interests and past work:

- Baryon Feedback
- tSZ effect measurements using ACTxDES
- Simulation Reconstructions in Cosmology
- ML applications in cosmology
- Emulators in cosmology
- Bayesian Statistics/Astro-statistics

Other hobbies:

- Hiking/skiing/outdoors
- Photography/Astrophotography

Jannik Truong | 2nd yr PhD student, Perlmutter group

Supernova Cosmology Project

- Simulation and optimization of future SN surveys for better w_0 - w_a constraints
- Synergies between DESI, LSST, Roman for SN Ia cosmology
- Magnitude standardization of SNe Ia with noisy spectra from Roman

👉 I also play piano a lot

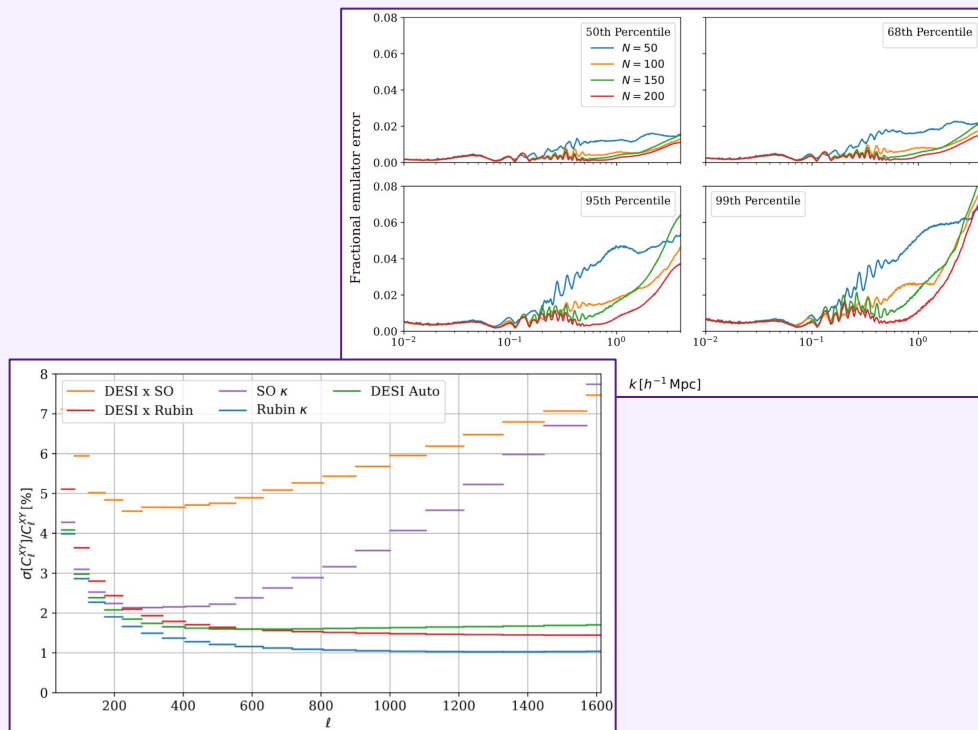

Alexa Bartlett

3rd Year
PhD Student

alexa_bartlett@berkeley.edu

- ❖ **Advisor:** Martin White
- ❖ **Research Interests:** Large-scale structure, PT, EFT, weak lensing
- ❖ **Wrapping up:** HEFT emulator, simulation/error budgeting for w0wa
- ❖ **Past:** CMB lensing trispectrum
- ❖ **Future:** More weak lensing, cosmic shear

Alejandro Cartes

(he/him)

BSc in Astronomy & MSc in Physics from U. Chile 🇨🇱

Visiting Scholar under the Simons Studentship Program

What I plan on doing at BCCP:

Exploring the CMB science & synergies with other probes

Specifically, CMB Weak Lensing guided by Simone and Gerrit

My previous research:

Supernova classification using Neural Networks and estimation of cosmological parameters from their light curves

Random facts:

My pets 🐱🐶

Lasagna

Leon

Looking forward to
meeting you all!

See you soon! 😊

Rongpu Zhou

Project Scientist at LBL

- DESI pipeline & survey operations
- Forward modeling of imaging systematics in DESI and other surveys
 - Do we understand observational systematics well enough for fNL?
- New dust map from DESI
- DESI-2 imaging surveys and high-z (LAE & LBG) target selections

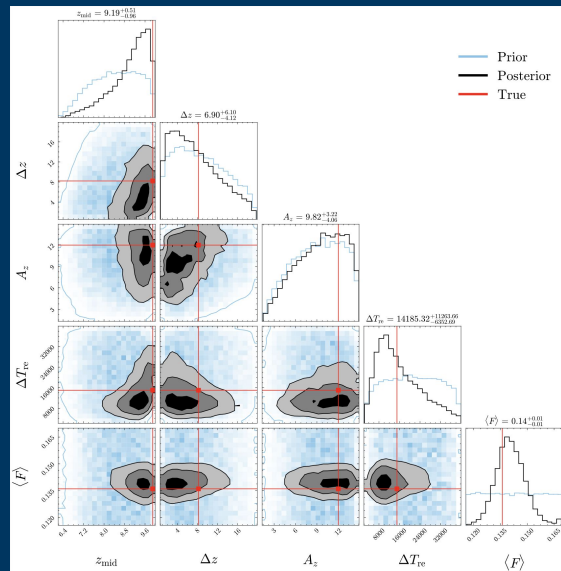

Diego González-Hernández

PhD candidate at UCSB | Intern at Berkeley Lab

- Parameter estimation for the Epoch of Reionization using the Ly α Forest at $z \sim 5.0$
- Exploratory work on a foundational model using Nyx simulations

- 1 Full Emulation and Inference
- 2 Simulation Based Inference
- 3 VQ-VAE for Nyx simulation patches

Martin White (faculty; theory+data)

[Cosmological perturbation theory. Exploiting DESI data. CMB + LSS x-correlation. Preparing for nextGen surveys (what should we have done last time with 20/20 hindsight?). Blue-sky ideas for future surveys.]

Too many individual projects to try to list, so ...

Short term: Science with DESI ... constraining inflation, GR and DE with galaxy surveys, x-correlation with CMB lensing and cosmic shear. Combining simulations and theory.

Medium term: More DESI, prep for DESI-II. What can be learned by combining DESI+Euclid+SPHEREx+PFS+LSST+SO+...? What framework should we use to model and interpret these data?

Long term: Cosmology “before noon”, i.e. large-scale structure above $z \sim 2$ ish. What can we learn from it, how do we map it and how do we analyze it. [StageV]

Alexandre Adler

Postdoc at UC Berkeley (technically)

email: aadler@lbl.gov office: 50B-4206 at the Lab

I work on simulations and data analysis for CMB experiments.

Most of my work revolves around the **Simons Observatory**: Simulating systematics for the Large Aperture Telescope (LAT) and exploring the data reduction for the Small Aperture Telescopes (SATs).

I also work on a balloon experiment called **Taurus**, which should measure the optical depth to reionization from the CMB **E-modes** on the largest angular scales ($\ell \leq 10$).

Credit: Jared May (Princeton)

The SO Site, Cerro Toco, Chile

Credit: Polocal/Hovercal team

Gabriel Lynch (UC Davis)

Current research interests:

- Understanding the BAO-CMB tension, and implications for cosmological constraints on Σm_ν
- Effects of small-scale baryon fluctuations on CMB C_l 's, constraints from data
- Also generally interested in developing and using CMB analysis tools, e.g. emulators, autodiff pipelines, etc

Past work:

- Modified recombination solutions to Hubble tension; reconstructing $X_e(z)$ from data; forecasts for SPT-3G, analysis for SPT-3G

Joanne Cohn (LBL 50-5015 and Campbell 305)

jcohn@berkeley.edu

Interests:

- What other systems can perturbation theory be used for/extended to?
- Simple descriptions of (often "checking" via simulations)
 - the cosmic web at large scales, at a single time, through time
 - What do estimates capture/leave out?
 - (earlier) galaxy formation and relations to structure formation, esp higher z

Not working on cluster masses to probe cosmological parameters

- because correlated scatter in measurements is hard to estimate/validate, if you want to know more about why one might worry...ask!
- very focused on systematics for clusters and elsewhere

Raul Monsalve

Associate Research Scientist and Senior Fellow

Space Sciences Laboratory (SSL), **UC Berkeley**

raul.monsalve@berkeley.edu

Research Interests and Activities

Learning about the **Dark Ages**, **Cosmic Dawn**, and **Epoch of Reionization** using 21-cm cosmology.

Designing and deploying **experiments** to measure the high-redshift 21-cm signal from the **ground and space**.

Participating in the **EDGES**, **MIST**, **EIGSEP**, and **LuSEE-Night** global 21-cm experiments.

Studying potential for cosmology of the low-frequency radio observations from the **Parker Solar Probe** NASA mission.

Nicolò Raffuzzi self presentation - LBNL

- PhD at Ferrara University, Italy
- CMB simulations and data analysis within the *LiteBIRD* collaboration
 - First release from an end-to-end *LiteBIRD* simulation pipeline
([2507.07122v4](#))
 - A Simulation Framework for the *LiteBIRD* Instruments
([2507.04918](#))
 - Mitigating HWP systematics at the map-making level: accuracy requirements for *LiteBIRD* (to be submitted)
 - *LiteBIRD* polarization anomalies: lack of large-angle correlation
([2508.16451](#))
 - Unveiling V Modes: Enhancing CMB Sensitivity to BSM Physics with a Non-Ideal Half-Wave Plate
([jcap](#))
 - Circular polarization from Pop III stars: theoretical predictions and detection prospects (in prep.)

Richard Feder (UCB postdoc)

- Member of *SPHEREx*, *DESI*, *CIBER* collaborations

General science interests:

- LSS as a probe of early universe physics
- Near-IR intensity mapping and cross-correlation science
- Astrostatistics / ML / data-driven modeling

At Berkeley:

- Redshift estimation for SPHEREx (with U. Seljak+)
- Systematics mitigation for galaxy clustering measurements
- Co-organizer of [BIDMaP](#) seminar (Thursdays @ 12pm) (free food)

Outside of work..

- I'm a musician! (saxophone, clarinet, flute)
- I love to bike and I love to hike!

rmfeder@berkeley.edu

Taylor Hoyt

Started as an LBL postdoc, switched to the university (as of today!) to close out my appointment.

My focus is on the (accurate) measurement of extragalactic distances and using those distances to estimate the universe's expansion rate today (the Hubble constant, H_0) and throughout cosmic history, $H(z)$.

My primary research interests (visit my website thoyt.lbl.gov to see more):

The Tip of the Red Giant Branch

Observations with Space Telescopes

Type Ia Supernovae

Jan Schütte-Engel

N3AS (Berkeley-Riken fellow)

Working at the **interface** between **theoretical particle physics**, **cosmology** and **astrophysics**

- What can we learn from early and late universe GWs about particle physics?
 - Particle physics signatures in GW spectra from primordial plasma and particle decays
 - BH populations to search for new particles
- New ideas for table-top experiments.
 - How to search for GWs with $f > 10^4$ Hz?
 - How can we find dark matter?

John Groh
Staff Scientist, LBNL

Adapting CMB sensor technologies for dark matter searches

- Developing scaling technology for TESSERACT-style sensors to enable kg-scale detectors searching for sub-GeV dark matter

Superconducting devices under test

Recently installed 10 mK test facility @ LBNL

Simons Observatory

Previous CMB focus was on the SAT instruments and survey in CMB-S4, but now pivoting to the Simons Observatory

Particular interests / ongoing efforts:

- Low-ell stability
- Instrumental systematics
- Multiplexed readout
- Possible future upgrades and observatory extensions

Example effect under study: magnetic pickup from scanning through the Earth's field (Credit: T. Tsan).

Example effect under study:
[nonlinear crosstalk](https://arxiv.org/abs/1808.07445)
